The Department of Obstetrics and Gynecology

## General Gynecology Practice

The physicians in the General Gynecology Practice provide preventive and primary gynecological care as well as comprehensive medical and surgical care to women with diseases of the reproductive system. Medical and surgical methods are available to treat all gynecologic conditions including urinary incontinence, management of pelvic support, and pediatric and adolescent gynecology to females with diseases of the reproductive system. Special attention is given to the psychological and social needs of women with these conditions.
